

# Are you going to have a baby - or thinking of it?

**Pesticides can harm your unborn baby as well as you! Here's what you can do:**

Avoid pesticides around the house.

If you do farm work, change clothes and shower immediately after work.

Don't go into a field in which pesticides have been applied.

Wash clothing worn at agricultural jobs separately from other family clothes.

If you handle pesticides - or clothes, boots, and other materials that have come into contact with pesticides, wash your hands.
